

The New DPE Powder Blender with Bag Table

Reduce Manual Handling in your production facility

All Stainless steel construction

Integrated Controls.

The Blender consists of a bag table, Powder funnel, Product circulation pump and controls.

Application

The blenders are used to mix solids in liquids.

In the food-processing industry, they provide a perfect solution for reconstituting powdered milk, making Ice Cream Mix, etc.

The liquid enters the mixing chamber at a high speed, thereby creating a vacuum at the centre of the impeller, which causes the suction of the solids. The fall of the solids can be regulated by means of a valve situated at the bottom of the hopper.
